

CTERA Insight — BYOC Cost Estimate

Generated 2026-04-29 · On-demand list prices — apply contracted/Reserved discounts.

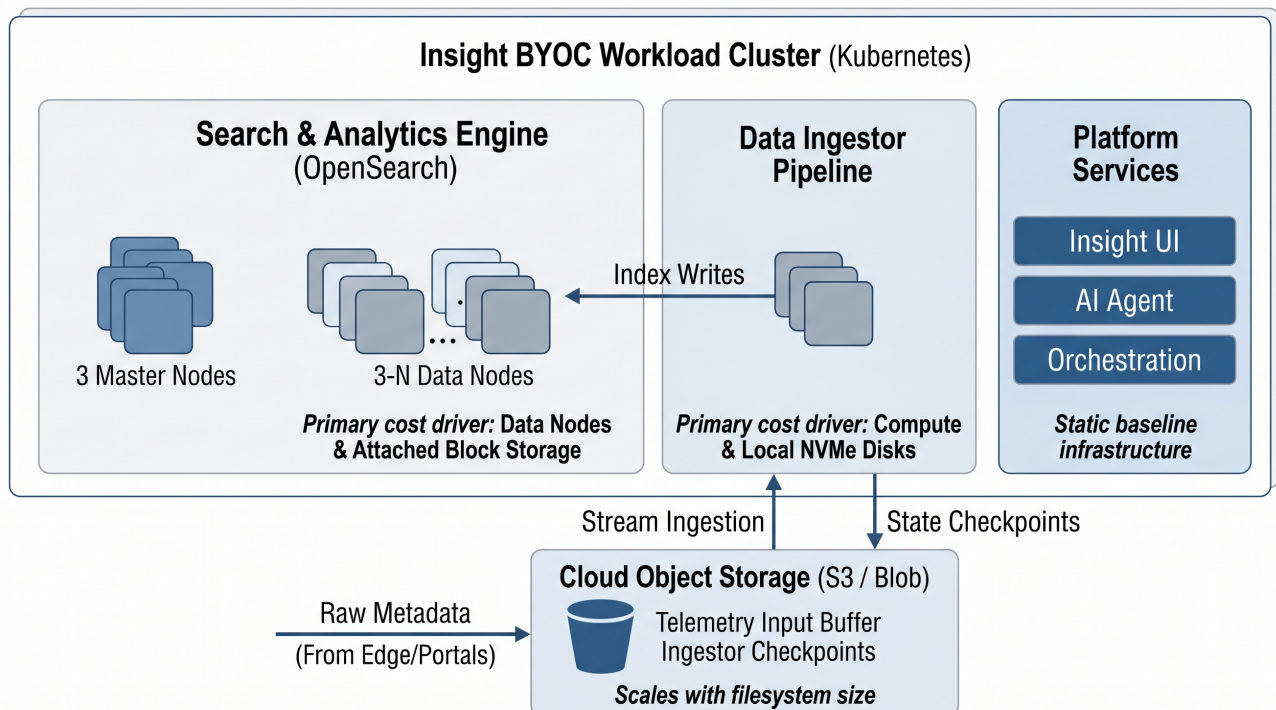

What is CTERA Insight?

AI-Driven Analytics Service for Data-Driven IT Operations

CTERA Insight is an add-on data service for the CTERA Intelligent Data Platform, designed to unlock advanced, AI-driven analytics across your entire global file system. By activating CTERA Insight, organizations can continuously ingest metadata from all CTERA Edge Filers and CTERA Portals into a unified index. This service provides the critical operational intelligence needed for IT leaders to transition from reactive data management to proactive, data-driven strategies for cost control, security, and compliance.

What this estimate covers

This document estimates the steady-state cloud infrastructure cost for a BYOC (Bring Your Own Cloud) Insight deployment — a dedicated Kubernetes cluster running in your own Azure (East US) subscription, fully isolated within your cloud account. As shown in the architecture diagram below, the billed infrastructure consists of the OpenSearch indexing cluster, the data ingestor processing nodes, the platform services, and cloud object storage.

How costs are calculated

Resource sizing is derived from three inputs specific to your environment:

Input	What it sizes
File count	Metadata processing capacity and search index size
Daily change rate	Processing hours, audit log volume, cross-zone data transfer
Retention period	Historical data storage (audit rollup + folder snapshots)

All prices are on-demand list prices (AWS us-east-1 / Azure East US). Apply contracted, Reserved Instance, or Savings Plan discounts to the exported line items.

Deployment Parameters

Cloud: Azure (East US)
Topology: 3-AZ (HA)
Files: 160,000,000
Daily change rate: 0.5%
Retention: 365 days
OS data nodes: 3 × D2pds_v5
App nodes: 3 × D2pds_v5
Data ingestor nodes: undefined × D4ds_v5 (150 GB local SSD) (33% duty cycle)
OS data per-node disk: 1,000 GiB
Object storage (input + checkpoints): 199 GiB

Cost Summary

Monthly	\$1,009.77
1 Year	\$12,117.27
3 Years	\$36,351.82

Bill of Materials

Compute

Service	Qty	Unit price	Monthly
AKS control plane (Standard)	1	\$73.0000/mo	\$73.00
OS master (D2pls_v5)	3	\$0.0680/hr×730	\$148.92
OS data (D2pds_v5)	3	\$0.0904/hr×730	\$197.98
App nodes (D2pds_v5)	3	\$0.0904/hr×730	\$197.98
Hosts insight-ui, Atlantis, Backoffice, ArgoCD, agent-service, Git, Artifact, Ingestor JMs (md + audit)			
Data Ingestor nodes (D4ds_v5 (150 GB local SSD))	1	\$0.2000/hr (~8 h/day ...	\$48.22
33% duty cycle, hourly runs ~20 min			

Storage

Service	Qty	Unit price	Monthly
OS data Premium SSD v2	3 × 1000 GiB	\$0.0750/GB-mo	\$225.00
Sized from retention + replicas + overhead			
OS master Premium SSD v2	3 × 10 GiB	\$0.0750/GB-mo	\$2.25
App-node PVC (Git + Artifact)	300 GiB	\$0.0750/GB-mo	\$22.50
Self-hosted Git server + artifact registry			
Blob Hot (input + checkpoints)	199 GiB	\$0.0180/GB-mo	\$3.59
Input bucket (90 d lifecycle) + Ingestor checkpoints			

Network

Service	Qty	Unit price	Monthly
Standard Load Balancer	1	\$22.0000/mo	\$22.00
NAT Gateway (base)	1	\$32.8500/mo	\$32.85
NAT Gateway (data processing)	~57 GB	\$0.0450/GB	\$2.55
Internet egress	50 GB	\$0.0870/GB	\$4.35
Customer-side egress estimate			
Cross-AZ replication	110 GiB	\$0.0100/GB	\$1.10
OpenSearch primary! replica across AZs			
Azure DNS zone	1	\$0.5000/mo	\$0.50

Managed

Service	Qty	Unit price	Monthly
Key Vault secret	10	\$0.5000/secret-mo	\$5.00
Key Vault key	2	\$1.0000/key-mo	\$2.00
Azure Monitor / Log Analytics	1	\$0.0000/mo flat	\$20.00
Flat estimate; volume-based in reality			

3rd Party (excluded)

Service	Qty	Unit price	Monthly
Agent service LLM tokens	-	\$0.0000/-	-
Customer-supplied API key + provider; usage-based, not deployment-size driven			

Monthly Total	\$1,009.77
---------------	------------

Out of scope: Agent service LLM token cost (customer-supplied API key + provider, usage-based).
